PROJECTS

TheraMotion React Native (Expo), FastAPI, Supabase/PostgreSQL <i>Thesis capstone project • Lead Developer, System • github.com/Miqu3lla</i>	Ongoing
• Led the system architecture for a stroke rehabilitation app that guides patients through ML-assisted physical therapy exercises. • Built the FastAPI backend and Supabase/PostgreSQL data layer supporting patient sessions, exercise tracking, and secure authentication. • Developed the React Native (Expo) mobile app used by patients for guided exercises, plus a separate React/TypeScript/Tailwind web dashboard for physical therapists to monitor patients and manage session notes. • Collaborated with a teammate leading the ML/pose-estimation components to integrate real-time exercise classification end-to-end.	
LifeHub React, TypeScript, Express.js, PostgreSQL, Redis <i>Lead Developer (solo) • github.com/Miqu3lla</i>	Personal Project
• Designed and built a full-stack personal expense and habit tracker on the PERN stack, handling the full stack independently from schema design to deployment. • Implemented a from-scratch sliding-window rate-limiting middleware and Zod-based request validation to protect and enforce integrity across API endpoints. • Applied a Redis-backed cache-aside pattern to reduce database load on frequently accessed data. • Used Drizzle ORM, BetterAuth, Zustand, and React Query across the stack.
